INFORMATION ON PRIMARY POWER RESOURCES OF POLAND

Deutsches Institut für Wirtschaftsforschung,
Wochenbericht
 Berlin, 18 Mar 1955

Because of the territorial changes following World War II, Polish power resources (coal, oil, gas, wood, water, and peat) were significantly augmented. The following tables illustrate the increase in production and consumption of power from all sources since the end of the war.

Total and Per Capita Production and Consumption of Power
 (in units of black coal [steinkohle])
